Databases: MongoDB

PROJECTS / OPEN-SOURCE

Mini-Blogging Site | [Link](#)

Nodejs, Express, MongoDB

This was a complete backened project. In this Project I created 7 API's which were of creating author, creating blog, logging in author, updating blogs, deleting blogs with filters and deleting blogs with blogId.

I also added authentication and authorization in this project by using JsonWebToken, so that any author can only edit or delete their own blogs and only after logging in.

Open to Intern | [Link](#)

Express, NodeJS, MongoDB

This is a backend project where I created 3 API's which consists of creating of college, creating intern and getting a list of interns of a particular college.

Book Management | [Link](#)

Nodejs, Express, MongoDB, AWS

This was a complete backend project which consists of 8 API's. This project is divided into three phases books, author and reviews.

URL Shortner | [Link](#)

Nodejs, Express, MongoDB, Redis(for caching)

In this project I've created two API's. The first one is for shorting a long url and second one for redirecting the short URL

Products Management | [Link](#)

Nodejs, Express, MongoDB, AWS, Password Hashing

This is a backend project of shopping cart. This project has been divided into 4 features User, Products, Cart and Order. And have 15 API's.
